

Introducing **Imperial** Video Response Monitoring

As your security provider, we're committed to providing a level of service that far exceeds expectations and also keep you up-to-date with emerging security applications & technology that would strengthen your existing onsite security.

At Imperial Security & Fire, we now offer Video Response Monitoring (VRM).

VRM is a powerful and cost-effective solution that combines CCTV Systems with a professional 24/7 Monitored Service to protect your property, people and assets.

Video Response Monitoring enables a more informed and rapid response and can be a cost-effective alternative to traditional guards and patrol manpower.

With VRM, your existing alarm system essentially acts as the 'trigger point'. Upon alarm activations, our Professional Back to Base Monitoring operators can access onsite cameras to visually verify events and, if required, can send Police direct to site.

Imperial Security & Fire's Video Response Monitoring service offers a range of Video Monitoring solutions to best suit and strengthen your onsite security.

- REMOTE VIDEO RESPONSE (RVR) from SMC, Australia's leading monitoring service.
- VIDEO VERIFICATION from Permaconn, a market leader in mission critical signalling solutions for the alarm security industry.

Call us now to determine the right solution for YOU.

Currently, your site is monitored using your existing onsite Alarm System.

Imperial Security's Video Monitoring Response works in tandem with a site's existing alarm system, allowing your existing onsite CCTV cameras to be accessed (pending compatibility) by our Professional Back to Base Monitoring centre. (Of course, if your site currently does not have a CCTV system, we're happy to assist, assess your site and provide a quote to best meet your CCTV needs).
